PRESSURE WAVE THERAPY**

INTELECT® RPW LITE

EASY ACCESS TO RADIAL PRESSURE WAVE THERAPY

For today's busy therapist, the need to treat patients efficiently is crucial. The Intelect® RPW Lite is a compact and user-friendly device that delivers effective Radial Pressure Wave (RPW) therapy with the minimum of fuss. Its range of essential features have been designed to remove the complexity from RPW treatment, leaving therapists free to concentrate on their patients.

KEY FEATURES

PORTABILITY

Compact and easy to handle.

LARGE LCD TOUCH SCREEN

For quick and easy control of treatment parameters.

PULSE COUNTER

INTENSITY LEVEL

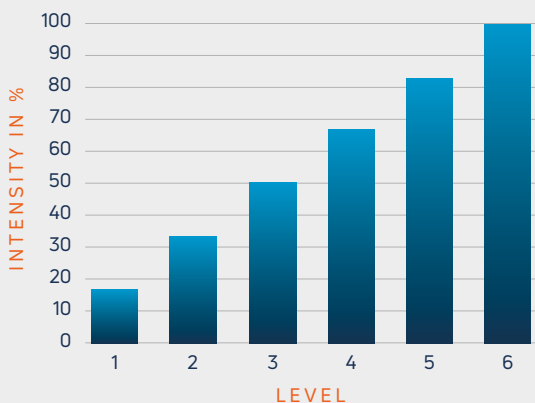

6 preset energy levels reduce set-up time whilst providing a useful range of settings for a variety of possible RPW indications.

EASY CONNECT

SPARROW™ handpiece technology with quick-release connection allows easy interchange of handpieces, ideal for treatments that require multiple different transmitters.

CHOICE OF 5 TRANSMITTERS

Relationship between intensity and frequency

INTENSITY	FREQUENCY
1	18 Hz
2	16 Hz
3	10 Hz
4	9 Hz
5	8 Hz
6	6 Hz

The Intelect® RPW Lite offers an easy way to adjust the intensity level. Starting with a low level (step 1 at 18Hz) up to maximum energy release (step 6 at 6 Hz). The frequency changes automatically based on the intensity.

TARGETED PAIN RELIEF

The Intellect® RPW Lite allows for the treatment of indications with radial, pneumatically-generated, low-energy acoustic waves, or 'pressure pulses'. The applied pressure pulse propagates radially within the tissue, generating a therapeutic effect.

INDICATIONS

- ACHILLES TENDINOPATHY (1)
- PLANTAR FASCIITIS (2)
- TRIGGER FINGER (3)
- TRIGGER POINTS (4)
- PAIN AND INFLAMMATION MANAGEMENT IN ORTHOPAEDIC CONDITIONS (5)

RADIAL PRESSURE WAVE TREATMENT

As a result of clinical evidence, most treatment protocols are based on 3 to 6 sessions of 1,500-2,500 pulses.

TREATMENT GUIDELINES

- Localise the painful areas you plan to treat
- Select the most appropriate transmitters based on treatment goal and targeted tissue
- Apply water-based ultrasound gel to the skin overlying the treatment area
- Always start with a lower level of intensity
- Perform a post-treatment test for improved function and decrease in pain
