Hexagon Sling System

The Hexagon Sling System basically allows you to do rehabilitation exercises using the Veloz Sling System.

Indications

Musculoskeletal diseases such as disc herniation, degenerative arthritis, shoulder impingement syndrome, myofascial pain, rotator cuff tear, scoliosis, tennis elbow, etc.

Neurological diseases such as stroke, spinal cord injury, cerebral palsy, Parkinson's, polio, peripheral neuropathy.

Those who need muscle strengthening, balance training, stretching, increased agility, coordination training, and improved proprioception.

Those who need pre- and post-surgical rehabilitation, manual therapy, exercise rehabilitation, and posture correction.

The Hexagon Sling System is available in both manual and motorized models. The motorized version allows for height adjustment of the slings via remote control, making it suitable for cervical traction or standing training exercises.

The Hexagon Sling System has a grip bar attached to the front for standing training. This allows the user to hold the grip bar and perform standing training stably.

The Hexagon Sling System has a grid-shaped mesh on the front and top. Users can perform various rehabilitation exercises by connecting our components, such as elastic ropes, tubing bands, and pulleys, to this mesh.

The Hexagon Sling System is a combination of six Wall Slings. This allows up to six users to train together at the same time.

The Hexagon Sling System is a method of installing and fixing to the floor. This increases space utilization and allows smooth operation of the rehabilitation system.
